Accurate Controls, Inc. delivers a high-quality non-proprietary security automation system. The current system was installed on September 30<sup>th</sup>, 2010 with Accurate Controls continuing after care services to this date. Since then, many of the products that are installed for the existing analog camera viewing and recording systems have been issued End of Life (EOL) status. This means that you or Accurate Controls can no longer obtain or repair these products through the manufacturer if any device should fail.

Accurate Controls has laid out a 2-phase plan to upgrade the facilities current analog systems with phase 1 being accepted. In this phase of work, the new system will upgrade the headend equipment to new IP base recording and viewing of the existing cameras. Also, Accurate Controls will maintain full integration of the camera call up functionality that the security door control system currently has available. If another company was to provide a VMS upgrade to the facility, they would need to be Wonderware certified to have the ability to make changes to the touchscreen software to maintain the current camera callup functionality. If the integration is not maintained the operators will lose the ability to live view a select camera while talking to persons at intercom/door locations. This will compromise the security of the facility with not readily having the ability to quickly view an area before opening a door.

Accurate Controls was sent a purchase order (PO# 220043) for the first phase of this plan back on July 12, 2021 and have been in the process of managing and moving forward in acquiring the products needed to complete this phase since this date.

All of us at ACI look forward to providing a system, which the owners can be assured is 100% operational and meets expectations set forth by the VMS phase 1 proposal. If you have any questions, comments or suggestions please feel free to call me at 920-748-6603 ext 273.

Respectfully,

*Ben Masters*
