## DEA “One Pill Can Kill” Campaign

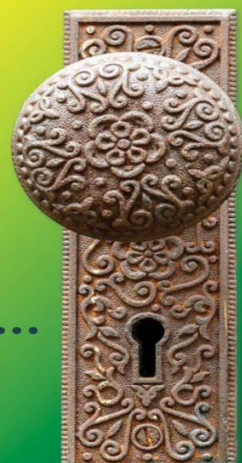

- Criminal drug networks are mass-producing fake pills and falsely marketing them as legitimate prescription pills to deceive the American public.
- Counterfeit pills are easy to purchase, widely available, often contain fentanyl or methamphetamine, and can be deadly.
- Fake prescription pills are easily accessible and often sold on social media and e-commerce platforms, making them available to anyone with a smartphone, including minors.
- Many counterfeit pills are made to look like prescription opioids such as oxycodone (Oxycontin®, Percocet®), hydrocodone (Vicodin®), and alprazolam (Xanax®); or stimulants like amphetamines (Adderall®).

[https://www.dea.gov/sites/default/files/2021-12/DEA-OPCK\\_FactSheet\\_December%202021.pdf](https://www.dea.gov/sites/default/files/2021-12/DEA-OPCK_FactSheet_December%202021.pdf)

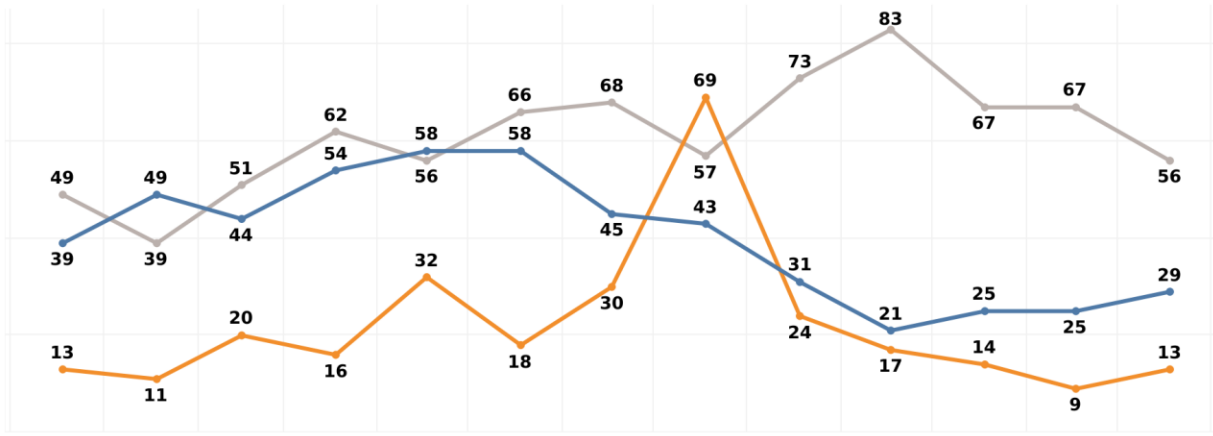

Many of the pills bought on the street are made with pill presses and laced with the deadly opioid synthetic fentanyl. If you or someone you know needs substance use, addiction, or mental health services, call the Northern Kentucky Addiction Helpline for assistance. We’re here to help!
